

3 DNA

HYALURONIC ACID 1%
+
DESOXYRIBONUCLEIC ACID 1%
+
HYDROSOLUBLE COLLAGEN 1%

Presentation.

Box with 10 ampoules each with 2 ml.

Composition.

Water, desoxyribonucleic acid (DNA), hyaluronic acid, hydrosoluble collagen.

Properties.

- Great capacity of water absorption.
- Retainer of the free radicals which provoke cutaneous photo-ageing.
- Inhibits the degradation of elastin and collagen.
- Favours the scarring process.
- Protects the destruction of hyaluronic acid.
- Retains the water in much bigger percentage than its own weight restoring the fibres which hold the skin tissues.
- Softens the epidermis, making it smoother and provoking a nice feeling of firmness.

Application.

DNA 3 Simildiet may be applied with all the techniques used in the aesthetic field: Ultra-sound, Transdermal electroporation, Iontophoresis, Pressotherapy, Vacuotherapy, Radiofrequency. It applies on the face after make up removed, giving a massage with the head of the device. The length of the treatment is 10-15 minutes approximately, it will depends on the device.

It also may be used as daily treatment applying ½ to 1 ampoule directly on the skin with a gentle massage.

Actions.

- Highest hydration.
- Triple strengthener for antiaging treatment.
- Anti-oxidant.
- Regenerating.
- Firming.
- Protector.
- Scarring.
